1. Introduction

Tourism Guide Planner is a web-based tourism platform designed to help foreign tourists explore historical places and learn about their history.

The platform provides information about historical destinations, allows tourists to search for places they want to visit, and provides a digital guide book containing historical information.

A major feature of the platform is the ability for tourists to find and hire local guides directly through the website. The platform also includes an AI chatbot that allows tourists to ask questions about historical places and receive helpful information.

In addition, tourists can upload photographs from the places they visit, creating a more interactive and engaging tourism experience.

2. Problem Statement

Foreign tourists visiting historical places may face several difficulties while exploring a new destination.

Some of the common problems include:

- Difficulty finding reliable information about historical places.
- Difficulty understanding the historical and cultural importance of a place.
- Difficulty finding a suitable local guide.
- Lack of a single platform that provides historical information and guide booking together.
- Tourists may have questions about a historical place while visiting it but may not have an immediate source for answers.
- Language and communication can create difficulties for foreign tourists.

Tourism Guide Planner aims to provide a single platform that addresses these problems.

3. Proposed Solution

Tourism Guide Planner provides a centralized platform where foreign tourists can discover historical places, learn about their history, ask questions using an AI chatbot, and connect with local guides.

The main components of the proposed solution are:

1. Historical Places Explorer
2. Digital Historical Guide Book
3. Local Guide Search and Booking
4. AI Historical Chatbot
5. Tourist Photo Upload

4. Objectives

The main objectives of Tourism Guide Planner are:

- To provide foreign tourists with easy access to information about historical places.
- To allow tourists to search and explore historical destinations.
- To provide detailed historical information through a digital guide book.
- To allow tourists to find and hire local guides through the website.
- To provide an AI chatbot for answering questions about historical places.
- To allow tourists to upload and share photographs from their visits.
- To create a platform that can be expanded with additional tourism features in the future.

5. Key Features

5.1 Historical Places Search

Tourists can search for historical places through the website.

Each historical place can have a dedicated page containing information such as:

- Name of the historical place
- Location
- Historical background
- Important historical events
- Cultural significance
- Architecture and important features
- Interesting facts
- Images

5.2 Digital Guide Book

The platform provides a digital guide book for historical places.

Tourists can use the guide book to understand the history and significance of a place before or during their visit.

The guide book can contain:

- Historical information
- Important events
- Architecture

- Cultural information
- Interesting facts
- Important locations within the site

5.3 Hire a Local Guide

Tourists can find local guides through the website.

Guide profiles can contain information such as:

- Guide name
- Profile photograph
- Experience
- Languages spoken
- Rating
- Reviews
- Availability

Tourists can select a guide and submit a booking request for their visit.

5.4 AI Historical Chatbot

The platform includes an AI chatbot that allows tourists to ask questions about historical places.

For example, a tourist can ask:

- Who built this monument?
- When was this place constructed?
- Why is this place historically important?
- What happened at this location?
- What are the important things to see here?
- Tell me an interesting fact about this place.

The chatbot is designed to provide quick and understandable information to tourists.

5.5 Tourist Photo Upload

Tourists can upload photographs from their visits.

Photos can be associated with the historical place that the tourist visited.

This feature can help create a more interactive tourism platform where tourists can share their travel experiences.

6. Project Workflow

The basic workflow of the platform is:

7. System Architecture

The platform follows a client-server architecture.

The frontend provides the user interface for tourists and guides. The backend manages application logic, user information, historical places, guides, bookings, and uploaded content.

The AI service handles questions asked through the chatbot.

8. Technology Stack

8.1 Frontend

The frontend can be developed using:

- React.js / Next.js
- JavaScript
- HTML5
- CSS3
- Tailwind CSS
- Responsive Web Design

8.2 Backend

The backend can be developed using:

- Node.js
- Express.js
- REST APIs

8.3 Database

The application can use a database such as:

- MongoDB
- PostgreSQL

The database can store:

- User information
- Historical places
- Guide profiles
- Guide availability
- Booking information
- Reviews and ratings
- Tourist photographs

8.4 Artificial Intelligence

The AI chatbot can use an AI/LLM API such as:

- OpenAI API or another suitable LLM service
- Retrieval-Augmented Generation (RAG), if required
- Historical knowledge base

8.5 Maps and Location

A map service such as Google Maps API can be integrated to display the locations of historical places and provide location-related information.

8.6 Deployment

The application can be deployed using cloud platforms such as:

- Vercel
- AWS
- Cloud database services
- Cloud storage for tourist photographs

9. User Roles

9.1 Tourist

Tourists can:

- Create an account
- Search historical places
- Read historical information
- Use the digital guide book
- Ask questions using the AI chatbot
- Search for local guides
- View guide profiles
- Submit guide booking requests
- Upload photographs
- Share their travel experience

9.2 Local Guide

Local guides can:

- Create a guide profile
- Add their experience
- Add languages they speak
- Add availability
- Receive booking requests
- Manage bookings
- Receive reviews and ratings

9.3 Administrator

The administrator manages the platform and can:

- Add and manage historical places
- Update historical information
- Manage tourist accounts
- Manage guide profiles

- Verify guides
- Manage bookings
- Manage uploaded content
- Manage reviews

10. AI Chatbot

The AI chatbot is one of the major features of the project.

The basic chatbot workflow is:

The chatbot can answer questions related to historical places and provide information in a simple and understandable format.

11. Guide Booking Flow

The guide booking process can follow these steps:

View Available Guides

|

--- Experience

--- Languages

--- Rating

--- Reviews

--- Availability

|

v

Select Guide

|

v

Select Date and Time

|

v

Submit Booking Request

|

v

Guide Confirmation

|

v

Visit / Tour

|

v

Review and Rating

12. Scalability and Future Scope

The platform can be expanded with additional features as the project grows.

12.1 Audio Guide Book

The digital guide book can be extended into an audio guide.

Tourists could listen to information about a historical place while exploring the location.

Historical Place

|

v

Audio Guide

|

--- History

--- Architecture

--- Important Events

--- Interesting Facts

12.2 AI Voice Guide

The AI chatbot can be extended into a voice-based guide.

A future system could convert AI-generated answers into audio using text-to-speech technology.

12.3 Multi-language Support

Since the platform is designed for foreign tourists, future versions can support multiple languages.

The historical guide book and AI chatbot can be extended to provide information in different languages.

12.4 Mobile Application

The website can later be extended into Android and iOS applications.

Possible mobile features include:

- Historical place search
- GPS-based location services
- Audio guide
- AI chatbot
- Guide booking
- Tourist photo uploads

12.5 Tourist Photo Community

The photo upload system can be expanded into a community feature.

Tourists could:

- Upload photographs
- Add captions
- Tag historical places

- Share travel experiences
- View photographs from other tourists

12.6 Expansion to More Destinations

The platform can initially focus on selected historical places and later expand to:

- More cities
- More states
- More countries
- Heritage sites
- Cultural destinations

13. Security

The platform should follow standard security practices, including:

- Secure authentication
- Role-based authorization
- Input validation
- API security
- HTTPS
- Secure database access
- Environment variables for API keys
- File type and size validation for photo uploads

14. GitHub Repository Structure

The proposed GitHub repository structure is:

```
Tourism-Guide-Planner/  
|  
+-- frontend/  
|   +-- components/  
|   +-- pages/  
|   +-- services/  
|   +-- hooks/  
|   +-- assets/  
|
```

```

+-- backend/
|   +-- controllers/
|   +-- models/
|   +-- routes/
|   +-- middleware/
|   +-- services/
|
+-- ai/
|   +-- chatbot/
|   +-- knowledge/
|
+-- uploads/
|
+-- docs/
|
+-- .env.example
+-- .gitignore
+-- package.json
+-- README.md
+-- project-proposal.tex
+-- project-proposal.pdf

```

15. Team Collaboration

The project is developed by a three-member team.

Team Member	Main Responsibility
Member 1	Frontend, UI/UX, Historical Places
Member 2	Backend, Database, Guide Booking
Member 3	AI Chatbot, Guide Book, Photo Upload

For GitHub collaboration, each team member can work on a separate branch:

```

main
|
+-- frontend
|
+-- backend
|
+-- ai-features

```

Completed work can be submitted through Pull Requests and merged into the main branch after review.

16. Development Roadmap

Phase 1 – Project Foundation

- Project setup
- GitHub repository setup
- Basic website interface
- Database setup
- Authentication

Phase 2 – Historical Places

- Historical place search
- Historical place pages
- Digital guide book
- Images and location information

Phase 3 – Guide System

- Guide profiles
- Guide search
- Guide availability
- Guide booking
- Reviews and ratings

Phase 4 – AI and Tourist Features

- AI historical chatbot
- Historical knowledge integration
- Tourist photo upload
- Tourist experience features

Phase 5 – Future Scalability

- Audio guide book
- AI voice guide
- Multi-language support
- Mobile application
- Location-based features
- Expansion to more destinations

17. Expected Outcome

The expected outcome of Tourism Guide Planner is a website where foreign tourists can search for historical places, learn about their history, ask questions using an AI chatbot, and find and book local guides.

The platform will also allow tourists to upload photographs from their visits.

The project is designed so that additional features such as audio guide books, AI voice assistance, multilingual support, mobile applications, and expansion to more historical destinations can be added in the future.

18. Conclusion

Tourism Guide Planner aims to make exploring historical places easier and more informative for foreign tourists.

By combining historical place information, a digital guide book, local guide booking, an AI historical chatbot, and tourist photo uploads, the platform provides multiple useful tourism services in one website.

The project also provides a foundation for future features such as audio guides, multilingual support, AI voice assistance, mobile applications, and expansion to more historical destinations.

Explore History. Discover Places. Connect with Local Guides.
