1. Introduction

Tourism Guide Planner is a web-based platform designed to help foreign tourists explore historical places in an easy and informative way.

Tourists often need to visit different websites to find information about historical places, understand their importance, find local guides, and plan their visit.

Our project aims to provide these services through a single platform. Users will be able to search for historical places, read information about them, use a digital guide book, interact with an AI chatbot, and find local guides.

The platform will also allow tourists to upload photographs from their visits, making the experience more interactive.

2. Problem Statement

Foreign tourists visiting historical places may face several difficulties while planning and experiencing their trip.

The major problems are:

- Historical information is available on different websites.
- Tourists may find it difficult to understand the historical importance of a place.
- Finding a reliable local guide can be difficult.
- Tourists may not have immediate help when they have questions about a historical place.
- Information about guides, historical places, and tourism services is not available in one place.

Tourism Guide Planner aims to solve these problems by providing a centralized platform for historical tourism.

3. Objectives

The main objectives of the project are:

- To provide information about historical places.
- To allow tourists to search and explore historical destinations.

- To provide a digital guide book.
- To provide an AI chatbot for historical questions.
- To help tourists find and hire local guides.
- To provide guide information such as experience, languages, ratings, and reviews.
- To allow tourists to upload photographs.
- To provide all major tourism features through one platform.

4. Proposed System

The proposed system is a web application that combines historical information and tourism services.

A tourist can first search for a historical place and view its details. The tourist can then use the digital guide book to learn more about the location.

If the tourist needs additional information, the AI chatbot can answer questions related to the historical place.

The tourist can also search for local guides and view their profiles before sending a booking request.

After visiting the location, the tourist can upload photographs and share their experience.

5. Main Features

5.1 Historical Places

The platform will provide information about different historical places.

The information can include:

- Name
- Location
- Historical background
- Cultural importance
- Architecture
- Important events

- Interesting facts
- Images

5.2 Digital Guide Book

The digital guide book will provide detailed information about a historical place.

Tourists can read about the history, architecture, culture, and important events associated with the location.

5.3 AI Chatbot

The AI chatbot will allow tourists to ask questions about historical places.

For example:

- Who built this monument?
- When was it constructed?
- Why is it important?
- What happened here?
- What should I see at this place?

The chatbot will provide simple and understandable answers.

5.4 Local Guide Search

Tourists will be able to search for local guides.

Guide profiles can contain:

- Name
- Experience
- Languages spoken
- Rating
- Reviews
- Availability

5.5 Guide Booking

After selecting a guide, tourists can choose a suitable date and time and submit a booking request.

The guide can then accept or reject the request.

5.6 Photo Upload

Tourists will be able to upload photographs taken during their visit.

This feature will make the platform more interactive and allow tourists to share their experiences.

6. Basic System Workflow

The basic working of the system will be:

1. Tourist creates an account or logs into the platform.
2. Tourist searches for a historical place.
3. Tourist views information about the place.
4. Tourist can read the digital guide book.
5. Tourist can ask questions using the AI chatbot.
6. Tourist can search for local guides.
7. Tourist selects a guide and sends a booking request.
8. Guide accepts or rejects the booking.
9. Tourist visits the historical place.
10. Tourist can upload photographs after the visit.

7. Technology Stack

The following technologies can be used to develop the project.

7.1 Frontend

- React.js / Next.js
- HTML
- CSS
- JavaScript
- Tailwind CSS

7.2 Backend

- Node.js
- Express.js
- REST APIs

7.3 Database

A database such as MongoDB or PostgreSQL can be used to store:

- Users
- Historical places
- Guides
- Bookings
- Reviews
- Photographs

7.4 Artificial Intelligence

An AI/LLM API can be used to develop the historical chatbot.

The chatbot can use historical information stored in the system to provide relevant answers.

7.5 Version Control

Git and GitHub will be used for project development and collaboration.

The project repository will contain the frontend, backend, database, AI-related files, and documentation.

8. User Roles

There will be three main types of users in the system.

8.1 Tourist

A tourist can:

- Register and log in.
- Search historical places.
- Read historical information.
- Use the digital guide book.
- Ask questions using the AI chatbot.
- Search for guides.
- Book guides.
- Upload photographs.

8.2 Local Guide

A local guide can:

- Create a profile.
- Add experience and languages.
- Add availability.
- Receive booking requests.
- Accept or reject bookings.
- Receive ratings and reviews.

8.3 Administrator

The administrator can:

- Manage users.

- Manage historical places.
- Manage guide profiles.
- Manage bookings.
- Manage reviews and uploaded content.

9. Future Scope

The project can be expanded with several additional features.

9.1 Audio Guide

The digital guide book can be converted into an audio guide so that tourists can listen to historical information while visiting a location.

9.2 AI Voice Assistant

The chatbot can be extended to support voice-based questions and answers.

9.3 Multiple Languages

The platform can support multiple languages to make it more useful for foreign tourists.

9.4 Mobile Application

A mobile application can be developed for Android and iOS.

The mobile application can provide:

- GPS-based location services
- AI chatbot
- Audio guide
- Guide booking
- Photo uploads

9.5 More Historical Destinations

The system can initially contain selected historical places and can later be expanded to cover more cities, states, and countries.

10. Team Responsibilities

The project consists of three members.

Team Member	Responsibility
Tanish Bansal	Frontend development and historical places module
Ayush Jindal	Backend development, database and guide booking
Mehak Garg	AI chatbot, digital guide book and photo upload

11. Expected Outcome

The expected outcome of the project is a working tourism website where foreign tourists can:

- Discover historical places.
- Read historical information.
- Use a digital guide book.
- Ask questions using an AI chatbot.
- Find and book local guides.
- Upload photographs.

The system will provide a simple and centralized tourism experience.

12. Conclusion

Tourism Guide Planner aims to provide a simple and useful platform for foreign tourists visiting historical places.

The system combines historical information, a digital guide book, an AI chatbot, local guide booking, and tourist photo uploads.

Instead of using multiple platforms, tourists can access these features from one website.

The project can also be extended in the future with audio guides, multiple languages, AI voice assistance, and mobile applications.

Overall, Tourism Guide Planner will make the process of exploring historical places more convenient, informative, and interactive.

Tourism Guide Planner

Explore History. Discover Places. Connect with Local Guides.
